#### OBJECTIVES

Following completion of this program the participant will be able to:

- Discuss minimally invasive GI surgeries, endoscopic findings, and associated risks and benefits.
- Describe recent advances, optimal diagnostic techniques, and research into adjunctive treatment regimens in celiac disease
- Review implications of obesity and GI weight loss surgeries available for treatment.
- Discuss various myths accompanying weight loss surgery versus factual information.
- Discuss the definition, epidemiology, diagnosis and treatment of IBS
- Discuss the difference between the 'person approach' and the 'system approach' in error management
- Explain the definition of 'Safety Culture' in the GI lab
- Verbalize evidence-based grade recommendations for medical interventions in the GI lab.
- Discuss upper, lower and obscure sources of GI bleeding and treatment modalities.
